OF FURNITURE

# PLASTIC FURNITURE

The infinite variety of colours and shapes of plastic materials allows designers to let their creativity run free and deliver ever more ambitious and innovative projects.

Plastic is also increasingly used by the most prominent furniture brands and is evident everywhere with chairs, lamps, stools, tables and even sculptures.

Plastic impresses with its light weight and high level of stability, ease of maintenance and colouring and its advantages in production compared with traditional materials.

Whether polypropylene, with or without glass fibres, polycarbonate, polyamide or polyethylene: there are no limits to the versatility of its use.

Our centre of excellence for developing products for the furniture industry is located in Fara Gera d'Adda, not far from Milan.

GLASSFIBRES ON DEMAND

## FLAME RETARDANTS

Gabriel-Chemie has a long experience in developing cutting edge solutions in flame retardants, complying with the most stringent regulations in force at national, European and global levels, becoming a leader in the public and stadium seating sector.

Among other things, our products comply with the Italian flame-retardant standard UNI 9177:1987 C1 and are free from antimony trioxide, meeting the ever increasing demands of the market.

### **GABRIEL-CHEMIE'S MULTIFUNCTIONAL MASTERBATCHES COMBINE MANY PROPERTIES, SUCH AS:**

- \_ UV-stabiliser to protect against sun exposure
- \_ Infrared reflectors for reducing heat absorption
- \_ Antistatic for reducing dust accumulation

MAXIMUM SAFETY IN PUBLIC SPACES

## ORiGiNAL AND ViBRANT COLOURS

The Gabriel-Chemie Colour Centre specialises in developing customised colours, with 100,000 already active in the company catalogue.

There is no limit to inspiration! Special effects such as metallic, marbled, holographic, concrete and wood to name a few. Every year, Gabriel-Chemie launches Colour Vision, a collection of colours mirroring the trends of tomorrow, inspired by designers and influencers.

## LASER MARKiNG

Differentiation, personalisation and value creation are possible thanks to laser marking, an innovative technology perfected by Gabriel-Chemie and whose characteristics make it unique in the furniture and cosmetics sector, offering maximum precision, excellent resistance to weather and chemical agents, and versatility of use on concave/convex surfaces.
